

37° JIC Bulkhead Fittings

Bulkhead fittings are designed to pass through a panel and secure with a locknut. Illustrated above is series 2700 Bulkhead Union and 306 Locknut. The panel hole should be drilled to the "W" diameter specified for that size. Since assembly is the same as the 37° JIC threads, see that setup for torque values and assembly instructions. With the variety of bulkhead fittings that we offer you can have a hose, tube, or quick disconnect conveniently mounted for easy access.
